Education

B.Tech, NIT Hamirpur
(2015 - 2019)

Computer Science &
Engineering,
CGPI – 7.25

Work Experience

Fincent (Sept 2023 - Present) - Impacted by cost cutting

- Engineered a customer-centric logo/icon upload feature using reusable components, facilitating seamless site-wide integration.
- Implemented AutoComplete functionality for invoice categories, allowing users to add new categories to the list.
- Utilized Redux slices for efficient data and event management, enhancing the first-time user experience through optimized onboarding for new features.
- *React.js, Javascript, Redux*

Better Inc. (October 2022 - June 2023) - Impacted by cost cutting

- Translated Figma designs into reusable React components, elevating application performance through the strategic implementation of lazy loading.
- Attained a test coverage exceeding 90% by meticulously crafting unit test cases in Jest and Mocha.
- Strengthened security measures for the frontchat-app utilized in customer support, proficiently executing A/B testing through LaunchDarkly.
- Leveraged predefined services for backend-triggered customer emails, streamlining communication processes.
- *React.js, Next.js, Jest, Node.js, Mocha, Typescript*

iQaunti (June, 2021 - Sept, 2022)

- Translated product specifications and Adobe XD designs into efficient and sustainable code, actively contributed to exploratory sessions for feature development.
- Implemented AWS Amplify to set up an AWS Cognito user pool within a React application, while seamlessly integrating cookie consent using OneTrust's Scripts.
- *React 16+, Next.js, Aws Cognito, Amplify, Typescript*

Wipro (August, 2019 - June, 2021)

- Worked collaboratively with the SAP team to integrate and enhance the UI seamlessly.
- Utilized HTTP calls to facilitate asynchronous exchange of JSON data between HTML pages and the server.
- *React.js, Typescript*

PROJECTS

BloggerSDK (June, 2020 - Sept, 2021) -   Preview

- Engineered a comprehensive CRUD application using the MEAN stack, integrating OAuth Sign-In with the njwt library to establish and validate JWTs, ensuring role-based user access.
- Implemented Angular Universal for Server Side Rendering, enhancing the application's SEO optimization.
- Employed the Crypto-Js library to ensure secure encryption and decryption of transactions, bolstering data integrity.
- **Mongo DB, Express, Angular 8, Node.js, Html, Css, Javascript,**
